

Tool - sport

We need:

- Plastic bottle, adhesive tape, scissors, twine, newspapers

Workflow:

1. First of all, we will prepare the aids already mentioned above.

2. Using scissor, I cut the top of the bottle about as indicated in the picture.

3. I wrapped the adhesive tape around the edges of the cut part of the bottle so that the edges of the adhesive tape protruded. I made small cuts on the tape that stuck out (see picture)!

4. I made a small hole on the edge of the torn part of the bottle.
5. The part where I cut the tape, I gradually bent into the bottle (around the region into bottle)!

6. I ripped about 5 – 6 pages from the newspaper.

7. I made the ball out of the torn pages of the newspaper. I wrapped twine or string around the ball so that it was firm. I wrapped the adhesive tape around the ball for strenght and to hold it together and not crimble. I cut the string or twine about 1,5 m from the joint of the string or twine.

8. I slipped the end of the string or twine through the hole in the bottle I made at the beginning. Well knotted.

9. I tried to hit the ball in the bottle. I recommed to see the attached link.
